XENedion Website — MVP Content

Prepared 3 November 2026 · Based on the XENedion ERP codebase as it stands today

> The MVP site markets only what the product does today: sales, an offline-ready POS, inventory, purchasing and three levels of tax, run across branches with role-based access. Everything else in the planned sitemap waits for a later release.

1. Positioning

One-line pitch: XENedion is the cloud ERP for growing multi-branch businesses: sell at the counter or by quotation, track stock in every branch, and stay tax-ready, all in one system.

Who it is for (MVP):

- Retailers and distributors with 1 to 50 branches who need a POS and back office that agree.
- Indian businesses that need GST done right, from unregistered to fully compliant.
- Businesses outside India, or not GST-registered, that need simple flat-rate tax.

Three promises every page repeats:

1. **One system, every branch.** Sales, POS, stock and purchases share one database, so numbers match across branches.
2. **Keeps selling when the internet drops.** The POS terminal works offline and syncs when it reconnects.
3. **Tax that grows with you.** Start on simple tax, move to GST, then turn on full compliance, without changing systems.

Tagline options:

- Run every branch from one place.
- The ERP that keeps selling, offline or online.
- From the counter to compliance.

2. MVP sitemap

The MVP ships 12 pages. Each page below is checked against the codebase as of today; "Later" pages go live when the module ships.

Planned page	MVP	What the product has today
Home	Ship now	All live modules below
Modules → Sales	Ship now	Quotations, sales orders, invoices, credit notes, PDF invoices
Modules → Inventory	Ship now	Products, variants, barcodes, batches and expiry, branch stock, transfers, bundles
Modules → Purchasing	Ship now	Supplier bills and debit notes
Modules → Point of Sale (new page, not in the plan)	Ship now	Separate POS terminal app, works offline

Modules → Tax & GST (new page, not in the plan)	Ship now	Simple tax, Basic GST, GST Compliance add-on
Platform → Overview (merge Architecture, Security, Integrations into it)	Ship now	Multi-company, multi-branch, roles, tenant isolation, audit log
Pricing	Ship now	Plans and feature flags exist in the product; use "Talk to sales" if prices aren't final
About	Ship now	No product dependency
Contact → Request a Demo, Talk to Sales	Ship now	No product dependency
Solutions → Retail, Distribution	Ship now	Short pages; they fit the live modules
Modules → Order Management	Fold into Sales	Sales orders live inside Sales
Modules → Vendor Management	Fold into Purchasing	Supplier records live inside Purchasing
Modules → Finance & Accounts	Later	Screen is a placeholder
Modules → Reports & Analytics; Platform → Dashboards & Analytics	Later	GST reports exist; general dashboards are placeholders
Modules → CRM, HR, Logistics, Warehouse Management	Later	Not built
Platform → AI & Automation	Later	Not built
Solutions → Manufacturing, Automotive, Logistics, Professional Services	Later	Need modules that are not built
Why XENedion → MCSAR, Implementation, Customer Success	Later	Needs content from the team
Resources, Partners	Later	Need case studies and a partner programme

MVP navigation: Home · Modules (Sales, Point of Sale, Inventory, Purchasing, Tax & GST) · Platform · Solutions (Retail, Distribution) · Pricing · About · Request a Demo (button).

3. Home page

Hero

- Headline: Run every branch from one place.
- Subhead: XENedion brings your counter sales, quotations, stock, purchases and tax into one cloud ERP, so every branch works from the same numbers.
- Buttons: Request a demo (primary) · See the modules (secondary)
- Visual: the POS terminal beside the back-office stock screen.

Proof strip (4 short facts)

- Works offline at the counter
- Cash, UPI and card payments
- Simple tax, GST and full GST compliance
- English, Hindi and Telugu

Module cards (one line each, links to the module page)

Card	One line
Point of Sale	Fast billing that keeps working when the internet drops.
Sales	Quotation to sales order to invoice, with PDFs your customers can trust.
Inventory	Stock, batches and expiry for every branch, in real time.
Purchasing	Record supplier bills and debit notes, and keep stock in step.
Tax & GST	Pick the tax level you need today; upgrade when you grow.

How it works (3 steps)

1. **Set up your company and branches.** Add branches, users and roles in minutes.
2. **Add your products.** Set up your catalogue with barcodes, variants and units.
3. **Start selling.** Bill at the counter or send quotations; stock and tax update on every sale.

Why teams switch (3 blocks)

- **Branches stay in sync.** One database for every branch, so stock and sales never disagree.
- **Your data stays yours.** Each company's data is isolated at the database level, and support can only see your account with your admin's approval.
- **Built for India, ready for elsewhere.** GST when you need it, simple flat-rate tax when you don't.

Closing call to action: See XENedion on your own data. [Request a demo]

4. Module pages

Each module page uses the same layout: headline, one-paragraph intro, 4 to 6 feature blocks, one screenshot, and a Request a demo button.

Point of Sale

Headline: Billing that never stops.

Intro: A dedicated POS terminal app for your counters. Cashiers sign in with a PIN, bill in seconds, and keep selling even when the internet goes down; sales sync as soon as it's back.

- **Works offline:** bills are saved on the device and synced automatically.
- **Cash, UPI and card:** choose the payment modes each terminal accepts.
- **Hold and recall bills:** park a customer's bill and serve the next in line.
- **Returns made safe:** returns are checked against the original invoice before any refund.
- **Shifts that add up:** open and close the till for each session, with a cash count at close.
- **Manager control:** voids and overrides need a manager's approval; every receipt can be reprinted.
- **Customer loyalty:** look up customers at the counter and redeem loyalty points.

Sales

Headline: From quotation to cash, in one flow.

Intro: Send a quotation, turn it into a sales order, and invoice it without retyping a line. Customer details and tax carry through every step.

- **Quotations:** create, revise and email quotations as PDFs.
- **Sales orders:** convert accepted quotations into orders in one click.
- **Invoices:** branded PDF invoices with your tax ID and invoice numbering per series.
- **Credit notes:** handle returns and corrections against the original invoice.
- **Customer records:** one customer list shared by sales and POS.

Inventory

Headline: Know what's on every shelf, in every branch.

Intro: Track stock by branch in real time. Every sale, purchase and adjustment updates the count and leaves an audit trail.

- **Products and variants:** sizes, colours and other attributes, each with its own code, price and barcode.
- **Categories, brands and units:** organise your catalogue; buy in boxes and sell in pieces with unit conversion.
- **Batches and expiry:** track batch numbers and expiry dates, and see what's expiring soon.
- **Branch stock and transfers:** stock levels per branch, with transfers between branches.
- **Reorder alerts:** set reorder levels per branch so you know when to buy.
- **Bundles and combos:** sell kits made of several products.

Purchasing

Headline: Purchases that keep your stock honest.

Intro: Record supplier bills as goods arrive, so stock and costs stay correct.

- **Supplier records:** keep supplier details and tax IDs in one place.
- **Supplier bills:** draft, review and post bills.
- **Debit notes:** record returns to suppliers.
- **Tax on purchases:** GST on purchases is captured for your registers.

Tax & GST

Headline: The right tax setup for where you are today.

Intro: Choose one of three levels and move up when your business needs it. Past invoices stay exactly as they were issued.

Level	Best for	What you get
Simple tax	Businesses outside India, or not GST-registered	Your own flat tax rates on every invoice
Basic GST	GST-registered businesses that file their own returns	GSTIN on invoices, CGST/SGST/IGST worked out automatically, GST register and HSN summary
GST Compliance add-on	Businesses that want compliance handled in the ERP	Input tax credit tracking, reverse charge, rate overrides, and GST reports with Excel export

- **Switch without starting over:** upgrades start from an effective date and never rewrite old invoices.
- **Reports your accountant wants:** sales by rate, HSN summary, purchases register, credit and debit notes, exported to Excel.

5. Platform page

One page covers Overview, Architecture, Security and Integrations for the MVP.

Headline: Built for businesses with more than one counter.

Intro: XENedion is a cloud ERP where every company, branch and user has a clear place. Your team sees what their role allows, and your data never mixes with anyone else's.

Feature blocks

- **Multi-branch by design:** add branches, assign users to them, and keep stock, sales and terminals per branch.
- **Roles and permissions:** decide who can sell, adjust stock, post bills or change tax settings.
- **Your data, isolated:** each company's records are kept separate at the database level, not just in the app.
- **Support only with your consent:** our support team can see your account only after your admin grants time-limited access, and every visit is logged.
- **Audit trail:** key changes record who did what, and when.
- **Your words, your language:** rename labels to match how your business talks, and use the app in English, Hindi or Telugu.
- **Documents stored safely:** invoices and quotations are generated as PDFs and kept in secure cloud storage.

Architecture (keep it short on the site): cloud web app for the back office, a separate POS terminal app that installs on the counter device, and one shared database behind both.

Integrations: don't list any for MVP. Use "Talk to us about integrations" until the team confirms which ones to show (see Open questions).

6. Pricing, About and Contact

Pricing

The product already supports subscription plans, a trial status, and turning features on per plan. Prices are not set yet, so the MVP page shows plan names and what's included, with "Talk to sales" in place of a price.

Plan (working names)	Includes	Price
Starter	Sales, Inventory, POS, Simple tax or Basic GST, 1 branch	Talk to sales
Growth	Everything in Starter, plus Purchasing and multiple branches	Talk to sales
Compliance	Everything in Growth, plus the GST Compliance add-on	Talk to sales

- Add a line under the table, "Every plan starts with a free trial", only if the lead confirms trials are offered.
- FAQ block: Can I change plans later? Do you charge per branch or per user? Is my data exported if I leave?

About

- **Headline:** We build the ERP we wished growing businesses had.
- **Body (3 short paragraphs):** the problem (branches, counters and the back office on different systems), the answer (one cloud ERP, offline POS, tax levels that grow with you), and the team.

- Needs from the team: founding story, team photos, office location.

Contact — Request a demo form

Field	Required	Notes
Full name	Yes	
Work email	Yes	
Phone	Yes	With country code
Company name	Yes	
Country	Yes	Tells sales whether to show GST or simple tax
Number of branches	Yes	1, 2–5, 6–20, 20+
Business type	Yes	Retail, Distribution, Other
Modules of interest	No	Checkboxes: POS, Sales, Inventory, Purchasing, Tax & GST
Message	No	

- **Talk to sales:** same form without the module checkboxes, plus a phone number and email shown beside it.
- **After submit:** "Thanks, we'll contact you within one working day." Confirm the response time with sales.
- **Partner enquiry:** later, with the Partners section.

7. Claims to avoid

The site must not promise these until they ship; each was checked in the codebase.

Don't say	Why	Say instead (if needed)
Finance, accounting, ledgers, P&L	Finance screen is a placeholder	"Finance module coming soon"
Dashboards, analytics, business reports	Dashboard and Reports screens are placeholders; only GST reports exist	"GST reports with Excel export"
CRM, HR, payroll, logistics, warehouse management	Not built	Leave out
AI, automation, forecasting	Not built	Leave out
Bulk import of products	Import screen exists but has no backend yet	"Set up your catalogue"
Files GST returns for you, GSTR-1/3B filing	Returns filing isn't built	"GST reports your accountant can file from"
E-invoicing and e-way bills	Code exists, but the GSP provider and CA sign-off are still open	"E-invoicing coming soon" until confirmed
Named integrations (Tally, Shopify, payment gateways)	None confirmed	"Talk to us about integrations"

Customer logos, numbers of users, uptime figures	No approved data	Leave out until marketing has it

8. Open questions for the lead

☐ Plan names, prices and limits (per branch, per user, or per terminal)?
☐ Do we offer a free trial, and for how long?
☐ Can we say "e-invoicing and e-way bills" yet, or wait for the CA and GSP decision?
☐ Are Hindi and Telugu ready to advertise across the whole app?
☐ Is online store checkout (website order to quotation to payment) ready to market?
☐ Which integrations, if any, go on the Platform page?
☐ Target launch markets: India only, or also outside India from day one?
☐ Screenshots: which demo company and data can we use?
☐ Sales response time to quote on the Contact page.
